A Careless Inventor

Dr. Oops was a careless inventor. One day, he tried to make a robot. First, he used a saw to cut the wood. He cut six pieces of rectangular woods to make a box. These were used for making the body of the robot.

Then, he folded a piece of metal to make the ears of the robot. They were hard and shiny.

The head of the robot is made of a plastic bulb. Dr. Oops used glasses to make its eyes. He tested the robot with Dr. Right. Dr. Oops controlled the robot to walk. However, the robot walked staggeringly. Suddenly, its legs were broken.

Dr. Oops was disappointed. Dr. Right tried to help Dr. Oops. They repaired the legs of the robot. Finally, the robot could walk again.
